

AMAN NIKUMB

PYTHON BACKEND & DATA ENGINEER | FASTAPI & PYSPARK ETL

Gurugram, India | +91 85140 87234 | amannikumbh73@gmail.com | linkedin.com/in/aman-nikumb | github.com/aman0981

SUMMARY

Two years building production Python services and data pipelines at a data-engineering consultancy. Designs and ships REST APIs with FastAPI and Django over PostgreSQL, MongoDB and Redis, with Celery and RabbitMQ carrying distributed background work, and builds code-first PySpark ETL on Databricks through bronze, silver and gold Delta Lake layers. Automated a schema-less database pipeline that cut manual effort by about 70%, and a caching and rate-limiting layer that removed 40%+ of redundant API calls.

TECHNICAL SKILLS

Languages & Core: Python 3, SQL, Golang, object-oriented design, asynchronous programming

Backend & APIs: FastAPI, Django, DRF, REST API design, microservices, Pydantic, SQLAlchemy (sync and async), Alembic, JWT/API-key authentication, CORS, rate limiting, streaming/chunked APIs

Data Engineering & ETL: PySpark, Databricks (Notebooks, Workflows/Jobs), Delta Lake, medallion architecture (bronze/silver/gold), ETL/ELT design, batch ingestion, Pandas, data validation, reconciliation, idempotent upserts

Databases, Caching & Search: PostgreSQL, MongoDB, Redis, Elasticsearch/OpenSearch, pgvector, DocumentDB, cloud object storage (AWS S3), Supabase

Distributed, Cloud & DevOps: Celery, RabbitMQ, asyncio, AWS (ECR, EKS, CloudWatch, S3), Docker, Git, GitHub Actions CI, Pytest (unit and integration), structlog, Postman, JMeter

EXPERIENCE

Software Engineer – Data | ENGINEO SOLUTIONS PVT LTD, Gurugram

Apr 2026 - Present

Promoted from Associate Software Engineer in April 2026

- Build a code-first ETL pipeline on Databricks with PySpark, transforming raw data from a cloud object-storage landing zone through bronze, silver and gold Delta Lake layers into Elasticsearch.
- Developed the end-to-end backend system for a client travel-aggregator web portal and deployed it on AWS across ECR, EKS, CloudWatch and S3, with some services written in Golang.
- Orchestrate pipeline runs with Databricks Workflows and expose a streaming API that delivers curated data to clients in chunks, building Elasticsearch queries dynamically from each request's filter payload.
- Designing a centralized data API that integrates an external data endpoint, a parse service that normalizes responses, and a DocumentDB sink that persists results for reuse.

Associate Software Engineer – Data | ENGINEO SOLUTIONS PVT LTD, Gurugram

Nov 2024 - Mar 2026

- Built a distributed backend platform for a US travel-domain client with Django, FastAPI, Celery, RabbitMQ, Redis, MongoDB and PostgreSQL, designing the task pipelines that run its background processing.
- Implemented Redis caching and rate limiting that removed 40%+ of redundant API calls, plus a layered API security stack (API keys, IP allow-listing, JWT, CORS); integrated AWS S3 and OpenSearch.
- Built a database automation pipeline for a schema-less platform at a Big-4 consulting firm: Excel to JSON to PostgreSQL through APIs, with dynamic parent-child relational mapping and foreign-key resolution across tables, cutting manual effort by about 70%.
- Developed an ETL pipeline for travel airline data and contributed to early lakehouse ETL development, gaining hands-on distributed data processing experience.

PROJECTS

XBRL Intelligence Engine | async FastAPI service and multi-source ETL (solo)

github.com/aman0981/XBRL_Engine

Python | FastAPI | async SQLAlchemy 2.0 / asyncpg | PostgreSQL | Alembic | Docker

- Async, multi-source ETL ingesting XBRL/iXBRL from SEC EDGAR, EU ESEF and direct upload into one canonical financial model: 24,852 facts, 71 filings, 552 canonical line items.
- Cross-source reconciliation, bitemporal restatement detection and regulator-aware mapping fallback chains, guarded by 135 unit and Postgres integration tests; hardened non-root Docker image.

HireBeacon | live job-intelligence platform (solo)

hirebeacon.in

Python | PostgreSQL (Supabase, pgvector) | GitHub Actions | Next.js | TypeScript

- Daily ingestion pipeline across 4,959 company career pages and government recruiting bodies, keeping 69,318 live listings refreshed; idempotent loads whose close-out gate blocks deletions when a crawl returns under 50% of baseline; 336 automated tests.

EDUCATION

B.Tech, Computer Science | GITA Autonomous College | GPA 8.54

2020 - 2024

CERTIFICATIONS & ACHIEVEMENTS

Certifications: Django Developer (LinkedIn Learning); 100 Days of Code: Python Pro Bootcamp (Udemy). **Problem solving:** 200+ problems on LeetCode and HackerRank; LeetCode 50-Days and Top SQL 50 badges.
